LANGUAGES

C#, TypeScript, SQL, PHP

FRONTEND

Angular, Angular Material, Tailwind CSS, DevExtreme, RxJS, Ionic

BACKEND

ASP.NET Core, EF Core, Dapper, NestJS, TypeORM

DATABASE

SQL Server

REAL-TIME

MQTT, MQTTnet, WebSockets

TESTING

Vitest, xUnit, unit testing

TOOLS & PRACTICE

Git, Azure, Swagger, Agile, code review

EDUCATION

BSc Software Engineering
University of Bahrain
2019 – 2023

CERTIFICATION

Microsoft Azure Administrator (AZ-104)
Microsoft
Aug 2023

LANGUAGES

English — Proficient

Arabic — Intermediate

PROFILE

Full-stack engineer with **3+ years** building and maintaining a large-scale **multi-tenant ERP platform** end to end — Angular front end, ASP.NET Core APIs, SQL Server data layer and real-time IoT integration. Comfortable owning a feature from database schema through to production UI across eight business domains.

WORK EXPERIENCE

Nov 2023 – Present

Software Engineer

Amthal Group · Manama, Bahrain

Build and maintain **Optimum ERP**, a multi-tenant platform covering HR, Finance, Procurement, Attendance, Access Control, Asset Management, Document Management and CRM.

- Deliver ERP modules **end to end** — SQL Server schema and business logic, ASP.NET Core REST APIs, server-side PDF reporting, and the Angular UI on top.
- Built the **shared Angular component library** (Angular Material, DevExtreme, Tailwind CSS) that every module's interface is assembled from, keeping UI consistent as the platform grew.
- Designed and maintain data-access layers with **Entity Framework Core and Dapper**, choosing per case between ORM convenience and hand-tuned SQL.
- Implemented **full Arabic/English localisation** with complete right-to-left layout support across the platform.
- Integrated **biometric and access-control hardware over MQTT**, keeping device events and ERP attendance records synchronised in real time.

Aug 2023 – Oct 2023

Software Engineer Intern

Gulf Aviation Academy · Manama, Bahrain

- Built an **inventory management system in PHP** that tracked academy assets and replaced manual stock handling in daily operations.
- Provided IT support and troubleshooting for academy staff.

PROJECTS

Renta — Car Rental & Fleet Management

Angular 19 · NestJS · SQL Server · in progress

Back-office console for the GCC rental market — 14 admin screens across fleet, contracts, customers, maintenance, damages, penalties, accounting and audit. **NestJS + TypeORM** API documented with Swagger, over a SQL Server schema with migrations and seed data; bilingual UI via ngx-translate.

TripCost Router

Angular 21 · ASP.NET Core · personal project

Ranks travel routes by **total trip cost** — fare, ground transfer, visa fee, hotel nights and food — not just ticket price. Angular 21 on **standalone components, signals and zoneless change detection**; ASP.NET Core API over 37,000+ route edges and 36,000+ visa rules with live Duffel fares. 215 tests.
